4. MEASURING PROCEDURE

- 1) Connect the " Probe Plug " into the " Input Socket ".
 - * *The input socket of PT-100 ohm is the " 3-12, Fig. 1 ".*
 - * *The input socket of Thermocouple type K/J/T/E/R is the " 3-11, Fig. 1 ".*
- 2) Select the " Power Off/On Switch " (3-7, Fig. 1) to " On " position.
- 3) Select the sensor type (PT-100 ohm, type K, type J, type T, type E, type R) by push the " Sensor Select Button " (3-5, Fig. 1).
- 4) Determine the display resolution to 0.1° or 0.01° by pushing " $0.1^{\circ}/0.01^{\circ}$ Button " (3-8, Fig. 1).
 - * *The meter can be selected the different resolution 0.01°C , 0.1°C , 0.01°F , 0.1°F , 1°C , 1°F .*
 - The relation of resolution/range/different sensor type, please refer the " 2-2 Electrical Specifications ", page 2.*
 - * *Push the " $0.1^{\circ}/0.01^{\circ}$ Button " once again, the display will get the alternation of high resolution and the low resolution.*

5) Data Hold :

During the measurement, push the " Hold Button " (3-2, Fig. 1) will freeze the display value & LCD will show the " HOLD " marker. Push the " Hold Button " once again will release the data hold function.

6) Relative Measurement

@ During the measurement, the circuit will memorize the last measured values if push the "REL. Button " (3-9, Fig. 1) at once, then LCD will show "0" & a " REL " marker appear on the LCD display.

@ The new measured temperature values will deduct above memorized " last measured value " automatically.

@ It will release the Relative Measurement function if push the REL. button at once again, at same time the "REL" marker will disappear.

Considering:

When marking the " Data Hold " & " Data Record " measurement, the Relative function is prohibited.

6) Data Record (Max. and Min. reading)

The Data Record function displays the maximum and minimum readings. To start the Data Record function, press the " Record Button " (3-3, Fig. 1) once.

" REC " symbol will appear on the LCD display.

With the " REC " symbol on the display :

- a) Push the " Recall Button " (3-4, Fig. 1) once, the " Max " symbol along with the maximum value will appear on the display.
- b) Push the " Recall Button " again, the " Min " symbol along with the minimum value will appear on the display.
- c) To exit the memory record function, push the " Record Button " once again. The display will revert back to the current reading.

7) Offset Value adjustment

@ Caused by the environment temperature change or other reasons.... The measuring value of the thermocouple sensor input (type K/J/T/E/R) may exist the drift of small digits.

@ If find that the measuring values exist deviation of small digits especially when measure the low temperature, then can adjust the " Offset Adjust VR " to make the compensation until get the correct reading exactly.

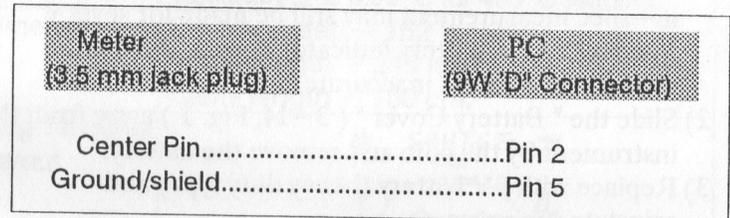

The offset adjustment procedures are following:

- a) Plug in a type k thermocouple probe to the input socket & Set the " Sensor Select Button " (3-5, Fig. 1) to the " Type K". Now the meter is measured the environment Temperature value.

- b) Use the fingers to hold on the "REL Button " (3-6, Fig. 1) together with the " Sensor Select Button " (3-5, Fig. 1) until the right down corner of LCD display show the "A" mark, use the screw driver to adjust the " Offset VR" (3-9, Fig. 1) until the display reading same as the environment temp. value exactly. Release the "REL Button " & the "Sensor Select Button ", then the function will return to normal condition.

5. RS232 PC SERIAL INTERFACE

The instrument features an RS232 output via 3.5 mm terminal (3-12, Fig. 1). The connector output is a 16 digit data stream which can be utilized to the user's specific application. An RS232 lead with the following connection will be required to link the instrument with the PC serial input.

The 16 digit data stream will be displayed in the following format :

D15 D14 D13 D12 D11 D10 D9 D8 D7 D6 D5 D4 D3 D2 D1 D0

Each digit indicate the following status :

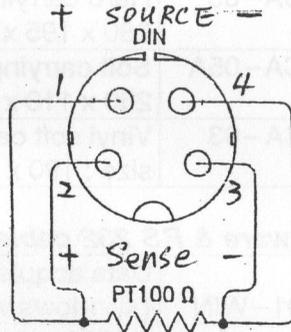

D0	End Word
D1 & D8	Display reading, D1 = LSD, D8 = MSD <i>For example :</i> <i>If the display reading is 1234, then D8 to D1 is : 00001234</i>
D9	Decimal Point(DP), position from right to the left 0 = No DP, 1= 1 DP, 2 = 2 DP, 3 = 3 DP
D10	Polarity 0 = Positive 1 = Negative
D11 & D12	Annunciator for Display °C = 01 °F = 02
D13	1
D14	4
D15	Start Word

6. REPLACEMENT OF BATTERY

- 1) When LCD display show the "  " marker, It is necessary to replace the battery. However, in-spec measurement may still be made for several hours after low battery indicator appears before the instrument become inaccurate.
- 2) Slide the " Battery Cover " (3-14, Fig. 1) away from the instrument by the coin and remove the battery.
- 3) Replace with 9V battery (heavy duty type) and reinstate the cover.
- 4) Make sure the battery cover is secured after change the battery.
